Createspace, United States, 2012. Paperback. Book Condition: New. 279 x 216 mm. Language: English . Brand New Book ***** Print on Demand *****.This book is for young students Gifted or Advanced in math. Working with a function or equation, we often need to change or modify it. Changing a function or equation, we can do it changing its curve. And changing it, we change its location or its form. Why change though? Doing problems with functions or equations, we often need to change them so that we can get the ones we want, and can get them readily and fast enough. And changing functions or equations, we say we do transformations to them, and say we do function transformations or equation transformations. And doing it, we do it changing its curve, that is, its graph. So we can call it a graph operation. In GRAPH OPERATIONS, discussions will be focused on how to change functions or equations changing their curves. So this book is about curves. And more specifically, what's covered here is how to put a curve in a graph many different ways. So you will get to see in this book, how to move, change or alter, or modify a curve, and how to get the equation of the curve changed, that is, the new equation. And you will get to see also, how to keep track of the variables used in the equation or function when it is getting changed. So we don't just do matrix applications to get a new curve or a new equation or function. We approach transformations pragmatically rather than theoretically. So you will get to see what actually changes and how changes are made or happen. Why though? As mentioned above, doing problems with functions or equations, we often need...
