

## Response plan for volcano hazards in the Long Valley Caldera and Mono Craters region, California

Filesize: 7.36 MB

### ***Reviews***

*Absolutely among the finest pdf I have got possibly read. I am quite late in start reading this one, but better then never. It is extremely difficult to leave it before concluding, once you begin to read the book.*

*(Prof. Lois Cormier II)*

## RESPONSE PLAN FOR VOLCANO HAZARDS IN THE LONG VALLEY CALDERA AND MONO CRATERS REGION, CALIFORNIA

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 38 pages. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 2002 Excerpt: . . . more than 12,000 M1. 2, 120 M3. 0, and eight M4. 0 earthquakes during the seven-month period through mid-January, with a cumulative seismic moment of  $3.3 \times 10^{24}$  dyne-cm (the equivalent of a single M5. 4 earthquake). The larger (M 4) of these earthquakes involved dominantly right-lateral slip along a WNW-trending fault zone within the south moat. The great majority of earthquakes had the broadband character of brittle, double-couple events (tectonic or volcano-tectonic earthquakes), although a few events had energy concentrated in the 1-to 3-Hz band typical of shallow, LP volcanic earthquakes or nondouble-couple focal mechanisms admitting the possibility of a significant dilatational (opening) component in the source process (Dreger and others. 2000). Mammoth Mountain on the southwest margin of the caldera was largely immune from the shallow (10 km or 6 miles) swarm activity, although numerous LP earthquakes occurred deep (10 to 25 km or 6 to 15 miles) beneath the southwest flank of the mountain through early April. Continuous gas monitoring showed a marked increase in CO, soil gas concentrations around the flanks of the mountain Figure A7. --Map showing locations of recognized sources (in red) contributing to the 1978-99 unrest in Long Valley Caldera and vicinity. Red circles with radial arrows indicate pressure centers of inflating magma bodies. Heavy dashed red lines indicate near-vertical fault zones (small, single-barbed arrows indicate sense of slip across individual faults zones). The larger double-barbed arrows indicate an average sense of slip across all the fault systems. Large open arrows schematically indicate regional,...
